

# MODEL GP-5100GR

NET FILL, AUTOMATIC BAG FEEDING TYPE PACKAGING MACHINE  
(Bag Fill and Seal Machines)

## ■FEATURES

This is an epoch-making automatic bag fill and packaging machine which has made it possible to net fill a bag by means of a load cell incorporated in the lifting claw.

By lifting the bag to the filling section level difference is eliminated so that flying up to powder when filling can be reduced. (Patent pending)

In combination with an optional be-aeration auger, dust generation can be prevented drastically. To comply with the HACCP Sanitation Management System and PL Safety Measures, the machines has passed the sanitation and safety inspection conducted by the Japan Packing Machinery Industrial Association.

To improve operability, a large color touch-panel and one-touch adjustment system are adopted.

## ■SPECIFICATIONS

|                    |   |
|--------------------|---|
| Applications       | Fine Powder (Seasoning, Medicine, Chemical, Agricultural Chemicals) |
| Operating speeds   | 7 pieces/min  |
| Bag dimensions     | Width; 200~300mm<br>Length; 300~450mm                               |
| Filling capacity   | MAX. 3kg  |
| Machine dimensions | Width; 2,410mm<br>Length; 2,680mm<br>Height; 1,830mm                |
